AutoCAD is cross-platform: it is available on Microsoft Windows, macOS, iOS, Android, and Linux. How does AutoCAD work? AutoCAD performs the following functions: Draws on a two-dimensional (2D) drawing canvas. Creates line objects, arc objects, circle objects, arc/circle objects, curve objects, spline objects, polyline objects, and text objects. Creates 3D objects from 2D objects. Implements and supports non-persistent graphical styles. Creates complex components like doors, windows, and doors and windows with rails. Adds effects such as reflection, bevel, and displacement. Creates legend objects. Adds dimensioning capabilities for straight line, arc, circle, spline, and polyline objects. Creates annotative types such as complex and absolute coordinate drawing. Creates a measurement scale from units of measure. Creates 2D layer objects, which are sublayers that can be placed on top of or under each other. Uses objects that support AutoCAD commands for dynamic parameters such as curve tracking, dynamics, and the new sublayers. Creates digital signatures for data exchanges. Creates design documentation. Allows users to view, select, and move objects from a predefined menu. Manages numerous graphical palettes. Enables users to change object properties such as color, linetype, and fill pattern. Allows a user to copy objects from one drawing to another. Creates records such as blocks, templates, and groups. Manages the toolbars and menus. Manages block and data sets. Manages user preferences, global preferences, and system settings. Integrates with a network server or a local server and operating system. Develops and implements standards such as DWG, DXF, and PDF. Works as a user-friendly, easy-to-learn application. Converts DWF and PDF files to DWG. Can be used as a vector-graphics editor. Compress file Starting with AutoCAD 2010, a feature called Automatic Reduce was introduced to compress drawing files. If this feature is enabled, AutoCAD compresses file on demand. For example, suppose you design a custom drawing which exceeds the file size limit, and do not intend to submit it for review. If you have Automatic Reduce enabled, and your drawing is sent to the server, it will be compressed. If you subsequently open the drawing file, the file will be decompressed. If you click the X in the upper right hand corner of the save and open windows, or select File > Save As > Save, it will compress the file again.
