HexaCrypt is a lightweight, portable, easy-to-use and user-friendly encryption solution that can encrypt any files in one click. All data stored by HexaCrypt is encrypted and decrypted using AES 256-bit key algorithm. HexaCrypt creates two encrypted containers on target computers. The first contains the decrypted files, and the second contains all encrypted files. The files can be accessed by both computers. The encryption files and a password are the only

requirements for HexaCrypt. For decryption, it uses the same password. A hexagonal shape icon brings the encryption and decryption process to everyone's attention. It also features three panes for easy manipulation, file browser, organizer, and settings manager. HexaCrypt is fully compatible with any Windows version, mobile and removable storage devices. HexaCrypt hides the actual location of the files while it sends them to target computers. The encryption process is free from noticeable CPU usage and consumes low disk space. The

application works without altering any of the system settings. HexaCrypt supports both 32-bit and 64-bit Windows operating systems. HexaCrypt Features: * Free encryption tool for Windows operating system * Two parallel containers are created on target computers for privacy of data * The files can be accessed using HexaCrypt and their decrypted version * Two kinds of encryption algorithms are used for encryption and decryption * Encryption files are light-weight and fast * It contains wipe utility which deletes encrypted files * You can decrypt

encrypted files * Encryption and decryption are fast * You can use two passwords for encryption and decryption * HexaCrypt supports both 32-bit and 64-bit Windows operating systems * HexaCrypt is optimized to work on any mobile and removable storage devices * Encryption and decryption are free from noticeable CPU usage Security can come in many forms, and a backup plan for your most important data is probably among the most essential for any individual. However, when you're looking to back up data on a home network, you might

be hit with some issues due to the nature of home networks. The average home network consists of various computers, laptops, and mobile devices, and each of them could potentially be accessed from the other devices. This means that a malicious user can access your private data at any time, whether from their own computer or from any of the other devices attached to your home network. Although there are various home encryption tools
