**BETTER THAN JAIL (RPG)** When L.E.A.R.N.E. sent in an app this time around, the game we received was an RPG with a twist. The biggest thing I liked about this game was that it had choices that you could make and that there was a story. Very few games have a story these days, so when you get one with choices, that's something. I also liked the fact that it was an option for the player to play as male or female or to choose if your character was a child or an adult and that it came with everything. For me, that's a lot because with other games I have to pay for extras or download them. There's a big bundle of extras that it comes with.

**THE CITY OF MAJIMARAH (RPG)** This game was nothing out of the ordinary when you first start playing it. There's nothing that makes you want to sit down and play it. It's a shooting game. You're basically using a gun, and you can control how it shoots. Your gun has three types of weapons: a rifle, a gun, and a rocket launcher. There are a few other things in the game like RPG's, bosses, and shopping. That's the whole thing.

**PORTRAYAL OF WOMEN (3D FPS)** When I first started playing this, it was a simple shooter. There's no story, it's really only a shooting game. But then, you play this one...this one, and this one. There's a couple of different ones. There are like a hundred different weapons, like a Super Shotgun or something. There's different tanks and planes and stuff. All the ones you buy are upgradable. You can upgrade the guns and the planes. They have a lot of different options and all these different guns. It's kind of nice because I'm always trying to upgrade my stuff so that I can have the best one. It's very similar to a shooter.

**©2007 ShadoufGames A Tale of Fallen Dragons, the current title of a long-running MMORPG, speaks to the very core of the MMO genre: the characters and the story. Like an Opera, roleplaying games include words, often lengthy, spoken by characters in a narrative, and music, which the audience is asked to conjoin to their own imaginations. Much like opera, RPG games rely heavily on player participation, from simple ambience and environment sounds and objects to actions of player characters and actions unique to the player. Maybe they are a little poorly-thought-out? Yes. Be that as it may, RPG games, particularly those based in First and Third Person, are quite engaging and fantastic, and really one of the best ways to spend \$15/€13.20/£9.99 /year on your PC. Adventure Time™ or A Tale of Lost Splatton™ are eccentric quasi-parodies of traditional RPGs, while Fable, Skyrim, or a three year-old Twilight Imperium are great RPGs and other game series can often occupy the same table as these classic games. But MMO games, through some strange mandate, have a tough time capturing a similar audience. World of Warcraft, one of the most popular MMO games, is held up as the standard for the genre. And indeed, WoW is a great example of a fantastic game, but it's oddities, like the PvP, has**

led many players to leave it behind. The birth of MMO culture (What?!) In the ancient land of Fargoth, a crude form of a single-session RPG was born during a glorious contest of wars to the north and west, where a human and a dragon, fighting over the fate of a hostile and seemingly unending war, were going to meet for the first time, or at least the first time that they were known to us. The battles were fiercely fought, and continued as each party was victorious and retreated from another. It was the one in which the death of the one of the dragon felled in an avalanche of rock, and during which one human seemed to have inherited the Mighty Winged Ruler. And though it was a dispute between the two races, it was a dispute often remembered by all Fargoths, as the two combatants never returned. The Birth of the MMO The origin of our first true roleplaying game can be found in The Land of
