Furthermore, i understand if this is way off but I am re-learning Java by reading some of the old books I have. My requirements?
-Need a working Java? -Running on JADE? -Need to fix the follow problem in code because of university policy. -Program must be to be finished (for curriculum purposes), however, I will have time to re-work it for my final project. (but this should not be required).
-Not sure if Java 7, 8, or 9 is required. I originally had a.jar file that would start a JADE.jar file in java main method that I embedded in my.jar but the.jar file needs to be in the same directory as JADE.jar file (I was only following tutorials for Java students). But when I put the Java file in the same directory, it is not being recognised as.jar file so I read up on the other ways to add classes to the jar So I did (what i'm not sure whether it is correct): I was using this tutorial I also downloaded Java 7, 8, and 9 from here When adding, I put.class files in the /ext/com directory As the /javadirectory /classpathentryexclude If you can help me clarify the above, it would be great :) thanks A: Download the java development kit from Extract the folder to java directory. Add the jdkhome/lib/ext to library and also add jdkhome/lib/ext/awt.jar to awt.properties (if its not present in above folder) Run the following commands in a terminal in a folder where your project is located. update the classpath. export CLASSPATH=\$CLASSPATH:/jre/lib/ext jar cvfm destination/name.jar -C The name you give to the file will be the filename you use in the compiled file. Save the java.
